Add Turpentine if Varnish is too Thick.
All varnishes and enamels are transparent. Therefore, before applying them the wordwork or piece of furniture should be carefully prepared, says Chicago Herald.

It is better to put on two coats of thin varnish than one heavy coat. If the varnish flows on and spreads quickly like an oil it is all right. But if the brush draws or sticks it needs thinning. To do this, add turpentine, a few drops at the time, until you secure the easy, olly flow. Should you get it too thin, this does no harm. It will, in fact, make the varnish dry more quickly, but on the other hand, will doubtless necessitate the use of three coats to insure the desired effect. A two-inch bristle brush should be used for varnishing.
